## Application No.: 10/561,152

## AMENDMENTS TO THE CLAIMS

## 1. & 2. (cancelled).

3. (currently amended) A polyimide precursor which comprises repeating units represented by formula (2) below

$$\begin{array}{c|c}
 & H & H & NH & CO & CO - NH \\
\hline
 & R^2 & N & N & HOOC & COOH \\
\hline
 & R^1 & R^2 & (2)
\end{array}$$

where R<sup>1</sup> and R<sup>2</sup> each independently denotes a hydrogen atom, a C<sub>1-20</sub> alkyl group, a C<sub>1-20</sub> alkoxyl group, or a C<sub>1-20</sub> fluoroalkyl group alkyl group, or alkoxyl group; "A" denotes a residue of tetracarboxylic acid; and n denotes an integer of 1 to 5000.

4. (currently amended) A polyimide which comprises repeating units represented by formula (3) below

where  $R^1$  and  $R^2$  each independently denotes a hydrogen atom, a  $C_{1:20}$  alkyl group, a  $C_{1:20}$  alkoxyl group, or a  $C_{1:20}$  fluoroalkyl group alkyl group, or alkoxyl group; "A" denotes a residue of tetracarboxylic acid; and n denotes an integer of 1 to 5000.

- 5. (previously presented) A polyimide precursor which is obtained by reaction between
- a diamine component containing at least 1 mol% of a diaminobenzene compound represented by formula (1) below

where R<sup>1</sup> and R<sup>2</sup> each independently denotes a hydrogen atom, alkyl group, or alkoxyl group and a tetracarboxylic acid or a derivative thereof.

- (original) The polyimide precursor as defined in claim 5, wherein the tetracarboxylic acid or the derivative thereof is an aromatic tetracarboxylic acid or a derivative thereof.
- (original) The polyimide precursor as defined in claim 6, wherein the aromatic tetracarboxylic acid is a tetracarboxylic acid having phenyl groups or substituted phenyl groups.
- (previously presented) A polyimide which is obtained by ring-closing reaction from any of polyimide precursors obtained by reaction between
- a diamine component containing at least 1 mol% of a diaminobenzene compound represented by formula (1) below

where R<sup>1</sup> and R<sup>2</sup> each independently denotes a hydrogen atom, alkyl group, or alkoxyl group and a tetracarboxylic acid or a derivative thereof.

- 9. (previously presented) A charge carrier transporting film which is formed from the polyimide as defined in claim 4.
- 10. (previously presented) An organic transistor device which comprises the charge carrier transporting film as defined in claim 9.
- 11. (original) An organic light emitting diode which has at least one layer of the charge carrier transporting film as defined in claim 9.
- 12. (previously presented) A fluorescent filter which comprises the charge carrier transporting film as defined in claim 9.
- 13. (previously presented) A liquid crystal alignment film which comprises the charge carrier transporting film as defined in claim 9.
- 14. (previously presented) The polyimide precursor as defined in claim 5, wherein  $R^1$  and  $R^2$  each independently denotes a  $C_{1:20}$  alkyl group,  $C_{1:20}$  alkoxyl group, or  $C_{1:20}$  fluoroalkyl group.

Application No.: 10/561,152 Docket No.: 0171-1250PUS1

15. (previously presented) The polyimide as defined in claim 8, wherein  $R^1$  and  $R^2$  each independently denotes a  $C_{1\cdot 20}$  alkyl group,  $C_{1\cdot 20}$  alkoxyl group, or  $C_{1\cdot 20}$  fluoroalkyl group.
